A team of engineers at a UK company called Delta-Cosworth (formally Delta Motorsport) have developed a miniature gas turbine generator for use as a range extender fitted to electric vehicles. Based at Silverstone, Scott Heiring and his team have perfected a powerplant sometimes referred to as a "microturbine generator" or "turbo generator".

A range extender (REX), or range extended electric vehicle (REEV), is a battery-powered electric car with an on-board range extender generator called an auxiliary power unit (APU). When the battery charge is low, the range extender starts automatically and charges it up. Unlike self-charging and plug-in hybrids, the range extender doesn't ...

According to Fathabad, 54 using a 1.1 kW micro wind turbine system can increase the range of the vehicle by 7.27 km from the original range of the tested vehicle, which is 110 km for the full charge, which means that the range is extended by 6.6%. The proposed model shows that the sample vehicle can achieve an 6.8% range extension (from 194 to 207.2 km) if ...
