

Rehart power Afghanistan

Who is rehart power?

REHART Power is a business division of REHART GmbH, a company with a solid ownership structure, which for the entire thirty-five years of its existence has enjoyed continuous, stable growth and is part of the REHART Group. Our goal is to use our hydropower screws ecologically to meet the latest criteria and to achieve optimum energy management.

Can micro-hydropower be used in remote Afghanistan?

In more remote areas of the nation, power options are more limited and micro-hydropower stations often are more feasible. In remote Afghanistan, micro-hydropower has been distributed to small villages using "mini-grids," which are grid systems that distribute from about 10kW to 10MW of electricity.

Does Afghanistan have solar power?

Besides, solar energy accounts for over two-thirds of Afghanistan's total renewable energy potential of over 300,000 megawatts (MW). Given its approximately three hundred sunny days per year, Afghanistan is well-positioned to harness solar power. Afghanistan's solar energy potential is comparable to that of four sunbelt states in the United States.

company with a solid ownership structure, which for the entire thirtyfive years of its existence has enjoyed continuous, stable growth and is part of the REHARTGroup. The hydropower division

Major hydropower stations such as the Indian-government funded Salma Dam (or Afghan-India Friendship Dam) inaugurated in 2016, have been a critical source of power generation for Afghanistan. The Ministry of ...

Since 2003, the "Schneckenversteh" has been building hydropower plants for the generation of green electricity under the REHART POWER brand. The principle is quite simple, water flows down and sets a hydroelectric auger in motion, which is converted into electrical energy. A great technology, especially for the topic of energy demand in the future.

Major hydropower stations such as the Indian-government funded Salma Dam (or Afghan-India Friendship

Rehart power Afghanistan

Dam) inaugurated in 2016, have been a critical source of power generation for Afghanistan. The Ministry of Energy and Water has estimated that hydropower could generate more than 23,000 megawatts per year in Afghanistan.

The hydropower screws already installed by Rehart operate for approximately 8,600 hours per year, meaning the systems are also baseload-compatible. Long maintenance intervals are good for operating results and the system even has no problems with dry running.

A hydropower screw by REHARTPOWER can generate energy around the clock and in all countries of the world. Even at rivers and streams with low heads the systems can generate power reliably and efficiently. Whether on the plain or high up in the mountains. Not only for the industrialized world is this technology suitable-

REHART Power is also a business unit of the REHART Group, a company with a solid ownership structure, which over its 35 years of existence has shown continuous and solid growth and is part of the REHART Group.
