A solar generator that weighs 10-20 pounds is ideal if you need a good amount of power on the go. At this weight, you'll probably be able to find one with a battery between about 400-800Wh. If you're looking for a large solar generator, you may want to consider getting one with wheels for more comfortable transportation.

In ideal conditions, a 1kW plant generates 4 units in a day. Thus, a 1000kW or 1 MW plant would generate: $4 \times 1000 = 4,000$ units in a day $4 \times 1000 \times 30 = 1,20,000$ units in a month However, it is crucial to note that solar generation can be affected by elements like weather, the orientation of panels, the quality of equipment, location, maintenance, etc.
