What is a photovoltaic (PV) panel?

A photovoltaic (PV) panel, also known as a solar panel, is a crucial component of a solar power plant. It is made up of small solar cells, which are devices that convert solar photon energy into electrical energy. Silicon is typically used as the semiconductor material in these solar cells, with a typical rating of 0.5 V and 6 Amp.

What is a solar schematic diagram?

A solar schematic diagram is a visual representation of a solar panel system. It typically starts with the solar panels, which are the main source of the system's power. The diagram shows how the panels are connected in series or parallel to form an array, allowing for maximum energy production.

I am not sure why you said 2pcs of 120ah12V batteries in series. He needs batteries to supply the 1500w loads for 12hours at night. Basically that is  $1500w * 12 = 18000wh$ . dividing by 50% depth of discharge as you choose flooded, that is  $18000/0.5=36000wh$  or divide by 0.8 if for AGM batteries, that is  $18000/0.8 = 22500wh$ .
