

What is energy in Belgium?

Energy in Belgium describes energy and electricity production, consumption and import in Belgium. It is governed by the energy policy of Belgium, which is divided between several levels of government.

How is the energy sector shaped in Belgium?

The energy sector in Belgium is shaped by the policies of its national and regional governments, as well as the European Union. The monitoring of the electricity and natural gas market happens on three regional levels, the Brussels-capital region, the Flemish region, and the Walloon region.

What is Belgium's energy policy?

It is governed by the energy policy of Belgium, which is divided between several levels of government. For example, regional governments are responsible for awarding green certificates (except for offshore wind parks) while the national government is responsible for all nuclear power.

Does Belgium rely on nuclear energy?

In line with the EU's energy targets, Belgium has become largely reliant on nuclear energy and around 46.4 percent of the country's total electricity production was from nuclear energy as of 2022.

Is EV demand increasing in Belgium?

Belgium EV demand is increasing. In 2022, passenger EV sales in Belgium increased by 39.7 percent year-over-year to 98,356 units, representing an EV penetration rate of 26.9 percent of total new passenger vehicle sales. Battery EV (BEV) sales increased by 72.1 percent year-over-year to reach 37,815 units.

## Sema energy Belgium

Ansprechpartner in Sachen Erneuerbare Energien, Potenzialanalyse, Solarenergie, Planung und Energieberatung.

Belgium proposes an 18.3% share of energy from renewable sources in gross final consumption of energy in 2030 as contribution to the EU renewable energy target for 2030. This level of ambition is significantly below the share of 25% by 2030 that results from the formula in Annex II of the Governance
