

Romanian distribution company Electrica is developing an artificial intelligence-based system for real-time monitoring of its headquarters' energy use. The system, a first for Romania, involves the development of a set of AI-based algorithms that draw on data from sensors throughout the building to develop energy consumption patterns.

Smart grid pilots are an excellent way to start building the skills and experience that will be required to rollout major transitional smart grid projects in the future. ... and reliability would future-proof their investment against the evolving requirements of the market and the smart energy transition in Romania, which is expected to become ...

The mural depicts the evolution of the Jiu Valley, Romania's coal mining region as steps are taken to move away from coal based energy production to green energy solutions. (AP Photo/Vadim Ghirda) People cross a street backdropped by a mural by Romanian artist IRLO in Petrosani, southern Romania, Friday, Oct. 11, 2024.

Companies work on sustainable energy/lighting, others on green buildings, smart mobility, circular economy, and are all top actors on Smart Cities tech., willing to extend their portfolio with a dedicated Climate Neutrality technology focus. All (SME and large) companies in Consortium have previously implemented Smart City projects in Romania.

RAISE supports the education and training programs needed to advance the sustainable energy sector in Romania and the United States. The Institute facilitates various programs for students, researchers, and professionals, including workshops, seminars, and training sessions that cover a range of topics related to renewable energy, energy efficiency, and smart energy systems.
