

How AutoCAD is used in solar PV design?

AutoCAD is a computer-aided design (CAD) software that when used in solar PV design, allows solar designers and engineers to create precise 2D and 3D CAD solar panel drawings, plant layouts and blueprints to help in the process of solar installation.

How to design a solar project?

Design any Off-grid PV system from scratch . Work perfectly on AutoCAD . Implement the financial and the economical analysts of any grid tie Solar project . Design and analyse the inverter system for your solar project . Design and analyse the batteries system for your solar project .

How to create a 3D model for solar panels?

Placing 2D polygons together with height dimensions will result into an extruded 3D model. Experienced CAD designers or 3rd party design studios can use these generated 3D models in your project as well. Generate optimized 3D module layouts to maximize the number of solar panels in your projects.

Why should you use AutoCAD for solar projects?

As a software, it is extremely feature-loaded and is an in-demand skill by solar companies around the globe. AutoCAD helps solar designers create comprehensive project designs of ground-mounted, rooftop, carport and sloped roof solar projects. It also provides wire sizing, stringing, and single line diagram generation.
