Sun is the most abundant source of energy for earth. Naturally available solar energy falls on the surface of the earth at the rate of 120 petawatts, which means that the amount of energy received from the sun in just one day can satisfy the whole world's energy demand for more than 20 years [5]. The development of an affordable, endless and clean solar power ...

Solar chimney power plants (SCPP) are structures that have the potential to generate a significant amount of electrical energy without harming the nature. Within the scope of this study, a micro-scale sloped solar chimney power plant (MSSCPP) experimental setup with a chimney of 8 m height and a sloped collector of 6.4 m diameter was designed and ...

The following conclusions are drawn: 1) The solar-geothermal coupling ORC power station outperforms the air-cooled geothermal ORC power station alone in net output power and thermal efficiency, which makes up for the impact of increasing daylight temperature on the thermal performance of the power station; 2) The maximum net power output of the coupled ...
