For solar power generation, one uses solar power modules containing multiple cells, well encapsulated for protection against various environmental influences such as humidity, dirt or hail. Conversion efficiencies well above 20% are routinely achieved with modern technology, resulting in about 200 W of electric power per square meter for full sun illumination.

Solar charge controller: The role of the solar charge controller is to control the working status of the whole solar powered generator system, and play a role in over-charging protection and over-discharge protection of the battery. In places with large temperature differences, qualified controllers should also have the function of temperature compensation.
