Spanish heating specialist Elnur Gabarron has developed a new solar-powered residential heating concept based on the use of storage heaters.

What is solar-powered residential heating?

Spanish heating specialist Elnur Gabarron has developed a new solar-powered residential heating concept based on the use of storage heaters. "Our storage heaters are specially designed to work on grid-connected PV installations, using surplus power to produce sustainable heating," a company spokesperson told pv magazine.

Do storage heaters work on grid-connected PV installations?

"Our storage heaters are specially designed to work on grid-connected PV installations, using surplus power to produce sustainable heating," a company spokesperson told pv magazine. The company offers the heaters along with its patented Solar Manager technology, which can purportedly detect solar power surpluses in real time.

How much does a storage heater cost?

"The storage heaters are designed for people that spend a lot of time at home, such as the elderly or people who work remotely from home," the spokesperson said. "The investment varies depending on the number of heaters. The Ecombi SOLAR costs EUR455 (\$475) plus added-value tax (VAT) and the Ecombi ARC EUR851 plus VAT."
