

European Energy has started the construction of a major solar farm in Latvia. The 148MW project is located near Targale in Ventspils county and, as one of the largest in the country, is expected to be connected to the grid by the end of 2025.

Set to become one of the largest PV farms in Latvia, the new plant is expected to start feeding power to the grid by the end of next year. The capacity will be installed near the village of Targale in western Latvia's Ventspils County and is expected to generate about 154,550 MWh of electricity annually.

This will be European Energy's first project in Latvia and the largest solar park in Latvia. The Targale solar park is expected to be connected to the electricity grid in 2024 and will generate approximately 110,000 MWh of green energy annually, providing around 52,000 households with their annual electricity consumption.

A diversified green energy portfolio is a major asset for Latvia's economy, attracting investment and ensuring a sustainable future," said Kaspars Melnis, Latvia's Minister of Climate and Energy. According to Latvia's National Energy and Climate Plan, the share of renewable energy sources in electricity generation is expected to increase ...

The broadest portfolio of energy and waste management services. ... Solar power in Latvia; Energy efficiency; Contacts. Requisites; For business. Electricity; Natural gas;

Latvia 2024 Energy Policy Review . 1. General energy policy. Overview . Latvia's energy system is relatively well diversified, with sizeable shares of - renewables in the form of hydro and bioenergy. Its electricity system, in particular, is dominated by hydropower. The largest energy-consuming sector is buildings, followed by transport.

1 ?· Latvia has ambitious climate goals, aiming for 57 percent of its electricity consumption to come from renewable sources by 2030, according to the International Energy Agency (IEA). However, the development of solar parks ...

These figures reflect energy consumption - that is the sum of all energy uses including electricity, transport and heating. Many people assume energy and electricity to mean the same, but electricity is just one component of total ...

Iepazistiet Solar Energy Latvia, vadoso Saules enerģijas iekartu piegādātāju Latvija. Musu uzņēmums tika dibināts 2020. gada, kad musu dibinātājs Edgars Perkons pamanīja, ka pastāv plaša starp nozares vajadzībām

Solar to electrical energy Latvia

un piegadotāju piedāvājumu. Kops ta laika mes esam augusi gan apjoma, gan reputacija ar ...

Danish renewable energy developer European Energy is set to build a 115MW solar plant in Latvia, near the town of Broceni in the Saldus region. One of the largest in Latvia, the solar plant marks a key milestone in ...

Development to date Latvia's energy system is largely based on renewable resources, primarily hydropower from the Daugava River, supplemented by wind, solar, and biomass. While natural gas imports cover energy shortages, the country aims to increase wind and solar energy capacity, with significant progress already made in 2022. Country is ...

European Energy has begun constructing Latvia's largest solar farm, boasting a capacity of 148 MW and featuring 240,000 solar panels. The solar farm will produce around 154,550 MWh annually to power approximately 40,000 households, supporting Latvia's energy independence and renewable energy goals.

The new European Energy project will significantly boost Latvia's solar energy generation, strengthening its position in the renewable energy market. ... According to the Latvian National Energy and Climate Plan, the share of renewable energy in electricity generation is expected to increase significantly, from 53% to 80% by 2030. To achieve ...

ST Board Chairman Sandis Jansons said that solar power has been a notable addition to the country's total energy portfolio in recent years - solar panels generated more than 128 gigawatt hours (GWh) of electricity in 2023. In Latvia's total electricity production balance, it is still a small part - about 2%.

European Energy has announced plans to start building a solar park in Broceni, Saldus Region in Latvia. The project has now entered its final development stages. When constructed, this massive solar project has an ...

Danish renewable energy developer European Energy is set to build a 115MW solar plant in Latvia, near the town of Broceni in the Saldus region. One of the largest in Latvia, the solar plant marks a key milestone in the country's shift to a green future.

European Energy, a global leader in renewable energy development, is ready to start construction of its first solar park in Latvia. This ambitious project, spanning 138 hectares in Targale, Ventspils county, will boast a substantial capacity of 148 MW, making it one of the largest solar parks in the country.

1 ?· Latvia has ambitious climate goals, aiming for 57 percent of its electricity consumption to come from renewable sources by 2030, according to the International Energy Agency (IEA). However, the development of solar parks in Latvia has so far been slower than in its Baltic neighbours. In 2023, the country had only 500 MW of solar capacity.

European Energy has announced plans to start building a solar park in Broceni, Saldus Region in Latvia. The project has now entered its final development stages. When constructed, this massive solar project has an ...

European Energy, a global leader in renewable energy development, is ready to start construction of its first solar park in Latvia. This ambitious project, spanning 138 hectares ...

Copenhagen, Denmark, 3 October, 2024 - European Energy is set to begin construction on the largest solar farm in Latvia to date. The solar farm will have a capacity of 148 MW once completed, which will make it one of the largest solar farms in the country.

However, the amount of electricity transferred to the solar electricity network has almost tripled in one year. In August, the average monthly electricity price in Latvia reached a three-digit figure for the first time since February, stopping at 102.49 EUR per megawatt hour (EUR/MWh), which is 22% more than in July.

Latvia recorded 54 MW of installed solar capacity at the end of last year, according to International Renewable Energy Agency (IRENA) statistics. This is "miserable" compared to the country ...
