What are the maintenance requirements of sun ray solar water heating system?

The maintenance requirements of Sun Ray Solar water heating system are similar to those of conventional water heaters. The collectors, piping and storage tank should be checked for leaks, the system should be flushed periodically to remove tank and collected impurities (scaling in hard water areas).

How does a solar water system work?

The system comprises of a solar collector, storage tank, heat transfer fluid, and a pump. The solar collector absorbs heat from the sun and transfers it to the heat transfer fluid, which then circulates through the storage tank, heating the water inside. The pump helps to circulate the fluid, ensuring efficient heat transfer.

Fill tubes with water before inserting. Cold water in hot tubes will shatter tubes. 3. Lubricate glass tubes with soapy water before inserting. Grease, Vaseline, oil, etc. will dissolve the silicon seals 4. The vent must be upright, at the top of the tank. Else it will blow out excess water when it boils. **LOW PRESSURE SOLAR GEYSERS Installation guide**
