

South Korea aura power

How many nuclear power plants will South Korea have by 2038?

South Korea aims to have 30 nuclear plants by 2038 and to more than triple its solar and wind power output to 72 GW by 2030. The government also plans to replace ageing coal power plants with more sustainable options like pumped storage hydroelectricity and hydrogen power plants.

Is South Korea a soft power?

South Korea's hard-won global reputation as a soft power and mature democracy could face sustained damage. "As an industrial economy, political stability is key to South Korea as it continues to face stronger economic competition from other economies in the region, such as China and Japan," says Mr Panda.

How will South Korea transform its energy sector?

The country has unveiled an ambitious plan to transform its energy sectors, aiming to generate 70 per cent of its electricity from carbon-free sources by 2038. South Korea aims to have 30 nuclear plants by 2038 and to more than triple its solar and wind power output to 72 GW by 2030.

Will South Korea's AI power plant buildouts meet electricity demand?

Tripling renewable energy capacity by 2030 could fully meet the projected electricity demand from South Korea's AI and semiconductor sectors, assuming existing power plant buildout plans proposed in the country's 11th Basic Plan for Long Term Electricity Supply and Demand (BPLE) guideline remain on track.

How much power does South Korea have?

Figure 1: South Korea's installed generation capacity, as of early 2024 (%) Total installed capacity = 144.4 GW as the country's sole electricity grid company, KEPCO owned and operated about 16,302 km of transmission lines at voltage levels of 154 kV to 765 kV, as of 2023.

Who owns South Korea's power generation capacity?

KEPCO, through its six generating subsidiaries, owns around 70 per cent of the generation capacity, while the remaining capacity is accounted for by independent power producers and community energy systems. Figure 1: South Korea's installed generation capacity, as of early 2024 (%) Total installed capacity = 144.4 GW
