

What is the energy sector like in Spain?

As such, it is centred on the massive development of renewable energy, energy efficiency, electrification and renewable hydrogen. Notwithstanding its considerable progress to date on decarbonising and increasing the share of renewables in the electricity sector, Spain's total energy mix is still heavily dominated by fossil fuels.

Which energy sources provide the most electricity in Spain?

In 2015, wind power provided the largest share at 19.1% followed by hydroelectric power at 11.1%. Solar power provided 5.2% and renewable thermal a further 2%. The total electricity supplied (demand coverage) from renewables was 37.4% of Spain's requirements in 2015.

What are Spain's renewables goals?

Spain's targets also foresee a sizeable buildout of new renewables capacity to reach 74% of electricity generation by 2030, notably wind and solar. As such, a stable, long-term remuneration framework for supporting the growth of renewables, including for storage, will be essential.

Does Spain still generate more electricity from renewable sources?

Spain continues to generate more electricity from renewable sources as its renewable share of electricity rose to 50.8 percent in 2023 from 42.2 percent in 2022. According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030.

What percentage of energy is generated in Spain?

RE generated / Total electricity generation. Renewable energy in Spain, comprising bioenergy, wind, solar, and hydro sources, accounted for 15.0% of the Total Energy Supply (TES) in 2019. Oil was the largest contributor at 42.4% of the TES, followed by gas, which made up 25.4%.

What is Spain's energy and Climate Framework?

The current Spanish framework for energy and climate is based on the 2050 objectives of national climate neutrality, 100% renewable energy in the electricity mix, and 97% renewable energy in the total energy mix. As such, it is centred on the massive development of renewable energy, energy efficiency, electrification and renewable hydrogen.
