

# Swapp energy Djibouti

How many people in Djibouti have access to electricity?

In Djibouti, 42% of the population has access to electricity. The government's Vision 2035 establishes goals to promote renewable energy source use for electricity generation and to pursue fuel-switching measures from fossil to renewables.

What is the second Djibouti-Ethiopia power system interconnection project?

The Second Djibouti-Ethiopia Power System Interconnection Project is helping Djibouti increase its reliance on renewable energy. This project, alongside the Sustainable Electrification Program, supports the country's goal of achieving 100% renewable energy by 2035.

How is energy used in Djibouti?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How can IDA help Djibouti build a sustainable future?

From strengthening education systems to improving energy infrastructure, IDA is helping Djibouti lay the foundation for a brighter, more sustainable future. By focusing on human capital development, infrastructure, and social protection, Djibouti is positioning itself as a model for resilience in the region.

What is IDA doing for Djibouti?

IDA's \$400 million in active financing is addressing key challenges, building resilience, and unlocking the country's potential for inclusive growth. From strengthening education systems to improving energy infrastructure, IDA is helping Djibouti lay the foundation for a brighter, more sustainable future.

What are the different types of energy transformation in Djibouti?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Djibouti for 2021. Another important form of transformation is the generation of electricity.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

? Swap Energy just wrapped up an incredible experience at the Canton Fair in Guangzhou! It was an action-packed few days where we not only reconnected with our trusted suppliers but also made some fantastic new connections that are going to help take our business to the next level! ? We were blown away by the cutting-edge innovations and fresh ideas we discovered.
