

Sweden gse system

How does the GSE system work?

This system goes together quickly and easily. The plastic trays that interlock are fixed to battens, with the roof tiles fitting up to the flashing. The panels are then hooked onto the trays and clamped into place. The GSE system has trays to suit almost all common panel sizes - please check the attached Tolerance Table for further information.

Why should you choose GSE integration?

Since then GSE integration has proven to be a very reliable partner with good communication, good availability, good service and high quality products. I really value our partnership and our goal is to continue to make the world more sustainable and houses more beautiful at the same time.

What is GSEI's ambition?

GSEI's ambition is the same as ours: to provide our customers with solutions that are always more adapted to the market, at the cutting edge of technology and to best respond to all renewable energy projects! It is therefore obvious for us to collaborate with this major player in residential solar energy.
