The African Development Bank Group (AfDB) on Wednesday said it has approved an USD-8-million (EUR 7.4m) concessional loan to back the construction of a 25-MW solar project in Zambia, which has faced rising costs ...

The main construction work includes 100 MW photovoltaic installations, a 330 kV booster station, and the construction of transmission lines. Once completed, this will be Zambia's largest solar power plant. The project will significantly improve the power supply in the central region of Zambia, supporting its industry, agriculture, and mining ...

The 54-milliwatt (MW) plant is expected to supply as many as 30,000 households and several businesses with electricity. This is particularly important in Zambia, where one-fifth of the population has access to electricity and drought has taxed hydropower facilities.

The Sinomine Kitumba project is expected to generate over 2,500 direct and indirect jobs, offering a significant boost to the local economy. Additionally, the project includes the construction of a 50-megawatt solar power plant, which will be integrated into Zambia's national electricity grid, further supporting the country's energy needs.

What is the difference between a megawatt and a megawatt hour? A megawatt measures the power capacity of an electrical system, providing an indication of how much electricity can be produced at any given moment. ...
