What is solar panel mounting & racking?

What is Solar Panel Mounting and Racking? Mounting solar panels refers to the process of installing solar energy systems onto a structure such as a building or ground mount. The procedure usually involves securing the panels with a racking system on the rooftop or ground and connecting the system to the power grid.

Which solar panel connector should I choose?

To select the right solar panel connector for each application, installers consider different features and technical specifications. Some of the options include Amphenol, Tyco, Radox, and the outdated MC3 solar connector.

What is a solar panel connector?

A solar panel connector is used to interconnect solar panels in PV installations. Its main task is ensuring power continuity and electricity flow throughout the whole solar array. The most popular type of solar connector is the MC4 connector.
