

Our guarantees in middle-income countries will accelerate their green transition to a clean and sustainable energy future," said Hiroshi Matano, MIGA Executive Vice President."We are excited to collaborate with the private sector in Tunisia to significantly increase its share of renewable energy for a prosperous future. The project will help meet the ...

Over the past decade, Tunisia's energy sector has faced significant challenges, resulting in a growing dependence on oil and gas imports and a widening of the financial deficit of the national electricity and gas utility STEG. Last summer, a critical moment was reached with the occurrence of significant power cuts, as STEG had neither the technical means nor the ...

The energy transition in Tunisia is being promoted by international actors, some of whom are connected to previous projects that have aimed to develop renewable energy in northern Africa for export to Europe.

Tunisia has set itself the ambitious goal of generating about a third of its energy demand from renewable sources by the year 2030. Currently, the country's energy production is almost exclusively derived from fossil fuels, ...

Additionally, the Tunisian government can partner with international donors and the private sector to create a more sustainable renewable energy plan by focusing on solar and wind energy, which Tunisia has in abundance. And to address coastal aquifer salinity and water scarcity, donors can support the desalination project started in 2022.

The proposed project is expected to have three main components: (a) establishment of a financial intermediation mechanism to support private sector energy efficiency investments (through ESCO projects among others); (b) a sustainable partial guarantee fund; and (c) technical assistance to local financial institutions, other intermediaries on the development of bankable projects and ...

SCALING UP RENEWABLE ENERGY INVESTMENT IN TUNISIA Tunisia has an abundance of solar and wind resources, providing sustainable and cost-competitive options to meet growing energy demand. The country has established a target of 30% renewable electricity production by 2030 in the Tunisian Solar Plan, first published in 2009 and revised in 2012.

Tunisia's ambitious plan to increase renewable energy production is geared toward reducing its overreliance on imported gas for its power generation that threatens its energy security. The Kairouan Solar Project will be the first milestone to achieve the government's plan and will pave the way for further private investments in the sector.

Tunisia sustainable energy program

The massive increase in production and consumption of fossil fuels during the 20th century was accompanied by several problems in economic, social and environmental levels. Thus, the energy as it is produced, distributed and consumed currently does not meet the requirements of sustainable development. Hence it is necessary to use RE that do not emit ...

Abstract. This paper evaluates the benefits of scaling-up energy efficiency and renewable energy programs for the building sector in Tunisia. Both energy and non-energy benefits are quantified using a bottom-up analysis approach to assess economic, environmental, and social impacts of a wide range of energy policies targeting new and existing Tunisian ...

In June 2023, the World Bank approved US\$268.4 million in financing for the Tunisia-Italy interconnector (ELMED) project that will link energy grids between Tunisia and European markets, with the eventual aim for Tunisia to export excess renewable energy.

Tunisia's goal to transition to a secure, viable, and sustainable energy future. This transition is being achieved by holistically addressing key energy issues with the removal of energy subsidies at the center, accompanied by im-proving the performance of energy sector companies, accelerating the development of renewable energy, and

INVESTING IN CLIMATE-RESILIENCE: TOWARDS A SUSTAINABLE ENERGY TRANSITION FOR TUNISIA'S SECONDARY CITIES Energy audits are a key tool for advancing the energy and climate transition because they help cities reduce their high and inefficient electricity consumption. -- Finance officer, city of Tataouine 1 In comparison to 2010, of which 13% are

The GOT aims to raise the usage of renewable energy resources to 35% of total power capacity by 2030. Green hydrogen. Tunisia's abundant solar and wind resources, as well as its proximity to Europe (which has an increased need for new and clean energy sources), make it a very attractive location for green hydrogen production.

Watch video of panel where the VNR was presented. Messages Clés . Tunisie. Dans la continuité de ses engagements à la mise en oeuvre du Programme de développement durable à l'horizon 2030, la Tunisie présente son second Rapport National Volontaire 2021 et réaffirme sa volonté et sa détermination de mettre en oeuvre les ODD malgré un contexte de pandémie du COVID 19 ...

Tunisia's ambitious plan to increase renewable energy production is geared toward reducing its overreliance on imported gas for its power generation that threatens its energy security. The Kairouan Solar ...

The TSP sets out Tunisia's ambition to harness its renewable energy resources in order to advance Tunisia's sustainable development. It includes specific 2030 targets for investment in wind energy, solar photovoltaic and concentrated solar power.

Tunisia sustainable energy program

Fatma Thabet Chiboub, Tunisia's Minister of Industry, Mines and Energy, stated: "This agreement with TE H2 and VERBUND marks a significant step forward in our quest for clean, sustainable energy. Tunisia, firmly committed to its energy transition, sees in this project a strategic pivot to strengthen its attractiveness as a destination of choice ...

The TSP sets out Tunisia's ambition to harness its renewable energy resources in order to advance Tunisia's sustainable development. It includes specific 2030 targets for investment in wind energy, solar photovoltaic and concentrated ...

The Tunisian government, through its Agence Nationale pour la Maitrise de L'Energie (ANME) and all of its partners, is called on to take advantage of the significant potential for energy efficiency and to achieve the objectives it has set for itself by accelerating the implementation of programs that expand the adoption of efficient appliances ...

The intensive use of energy has caused harmful effects to the environment, the most dangerous and most global of them is the climate change [1], [2] deed, the energy consumed in the world is largely based on fossil fuels (oil, natural gas and coal) which emit Green House Gas (GHG), including carbon dioxide, which are responsible of global warming [3], [4].

Energy poverty--the lack of adequate, affordable and reliable energy access--continues to impact rural Tunisia. Access to sustainable energy, as emphasized by SDG 7, provides a foundation for improving education, health care and economic development, according to the Sustainable Energy for All.

Tunisia has set itself the ambitious goal of generating about a third of its energy demand from renewable sources by the year 2030. Currently, the country's energy production is almost exclusively derived from fossil fuels, mainly imported from abroad.

The Tunisian Solar Plan (TSP) is Tunisia's official long-term plan for renewable energy. The TSP sets out Tunisia's ambition to harness its renewable energy resources in order to advance Tunisia's sustainable development. It includes ...
