What is Hydrostor doing in Broken Hill?

Canadian firm Hydrostor has struck a deal to provide back-up power to the remote New South Wales outback town of Broken Hill using a compressed air energy storage plant that will be built in an underground cavern at one of the region's closed mines. An artist's impression of the 200 MW/1,600 MWh Silver City Energy Storage Project. Image: Hydrostor

How long will Hydrostor lease Broken Hill?

Hydrostor will employ an advanced compressed air energy storage system near Broken Hill. An agreement between Hydrostor and Crown Lands, part of the NSW department of planning, housing and infrastructure (DPHI), will see Hydrostor lease the land for a period of 65 years, with construction expected to begin in 2025, following development approval.

Will Hydrostor be better than diesel generators in Broken Hill?

(Supplied: Hydrostor) The Transgrid report highlighted that Hydrostor's project was expected to deliver \$286 million in net benefits over a 27-year assessment period, just under 6 per cent more than the diesel generators. Ms Jordan said it would have broader impacts in Broken Hill than the generators.

How important is Hydrostor A-CAES in Australia?

Hydrostor president Jon Norman said it was past the pilot stage for A-CAES projects in Canada and was in advanced development stages in California. He said the Broken Hill project was important. "In Australia it really becomes an important proof point at full scale," he said.

What is Hydrostor's new partnership with TransGrid?

Hydrostor Vice President Martin Becker said the new partnership with Transgrid, which comes after the company announced a binding agreement with Australian miner Perilya to leverage existing assets at the Potosi mine site to support construction of the Silver City project, is a key moment for the technology.

Is Hydrostor a long-term solution for TransGrid?

Transgrid's Executive General Manager of Networks, Marie Jordan, said: "The preferred long-term solution put forward by Canadian firm Hydrostor is in the long-term interests of electricity customers.

Canadian firm Hydrostor has struck a deal to provide back-up power to the remote New South Wales outback town of Broken Hill using a compressed air energy storage plant that will be built in an underground cavern at one of the region's closed mines.

The historic mining town of Broken Hill in NSW is set to become home to an innovative energy storage solution. The Silver City Energy Storage Project will provide back-up power supply to the remote community of around 16,000 people. ARENA has conditionally approved \$45 million grant funding to the \$652 million

compressed air storage project to ...

Silver City is a 200 MW Advanced Compressed Air Energy Storage (A-CAES) facility that is under late-stage development in Broken Hill, New South Wales. The project provides unmatched benefits to consumers in a remote region with extensive renewable infrastructure and resources.

On behalf of the Australian Government, the Australian Renewable Energy Agency (ARENA) has announced it has conditionally approved \$45 million in funding to construct a 200 MW / 1600 MWh fuel-free energy storage facility, developed by Hydrostor Inc, utilising their Advanced Compressed Air Energy Storage (A-CAES) technology and repurposing a disused ...

Long duration energy storage (LDES) developer and operator Hydrostor and the New South Wales (NSW) government have signed a Crown Lands agreement to enable the construction of the Silver City Energy Storage Centre designed to provide backup power to Broken Hill.

Located 1,140 kilometres northwest of Sydney, the New South Wales (NSW) city of Broken Hill will have its large-scale back-up diesel generator superseded by a mini-grid system supplied by Canadian-headquartered long ...

Canadian company Hydrostor plans to repurpose a former Broken Hill mine to store up to 200 megawatts of energy as compressed air which would operate in a similar way to pumped hydro.

Canadian firm Hydrostor has struck a deal to provide back-up power to the remote New South Wales outback town of Broken Hill using a compressed air energy storage plant that will be built in an underground ...

From pv magazine print edition 3/24. In a disused mine-site cavern in the Australian outback, a 200 MW/1,600 MWh compressed air energy storage project is being developed by Canadian company Hydrostor.

Global long duration energy storage (LDES) developer and operator, Hydrostor, and the New South Wales (NSW) Government have officially signed a Crown Lands agreement to enable the construction of the Silver City Energy Storage Centre, designed to provide crucial backup power to Broken Hill and support the stability of energy in the region by enabling a mini ...

Hydrostor has reached an agreement with New South Wales (NSW) transmission network operator Transgrid that will see the proposed 200 MW/1,600 MWh Silver City Energy Storage Project support the reliability of electricity supply for Broken Hill by as early as 2027. Hydrostor is planning to build a 200 MW energy storage system with eight hours of ...

MELBOURNE, AUSTRALIA, 8 NOVEMBER 2024 - Global long duration energy storage (LDES) developer and operator, Hydrostor, and the New South Wales (NSW) Government have officially signed a Crown Lands agreement to enable the construction of the Silver City Energy Storage Centre, designed to provide crucial

backup power to Broken Hill and support the stability of ...

Located 1,140 kilometres northwest of Sydney, the New South Wales (NSW) city of Broken Hill will have its large-scale back-up diesel generator superseded by a mini-grid system supplied by Canadian-headquartered long-duration energy storage (LDES) developer Hydrostor's advanced compressed air energy storage (A-CAES) technology.

The Broken Hill Hydrostor Project-Compressed Air Energy Storage System is a 200,000kW energy storage project located in Broken Hill, New South Wales, Australia. The rated storage capacity of the project is 1,600,000kWh. The electro-mechanical energy storage project uses compressed air storage as its storage technology.

Hydrostor's compressed air energy storage (CAES) technology is a promising LDES technology with potential to provide 8+ hours of storage duration. While traditional CAES is a mature technology that has been developed at utility scale (100+ MW) it is reliant on natural gas for power generation.

Hydrostor has developed, deployed, tested, and demonstrated that its patented Advanced Compressed Air Energy Storage ("A-CAES") technology can provide long-duration energy storage and enable the renewable energy transition.

Its most advanced projects are the 200MW/1,600MWh Silver City project in Broken Hill, New South Wales, Australia and Willow Rock, a 500MW/4,000MWh undertaking in California. Norman: "For the Broken Hill project, we are looking to reach financial close this year. We're working with contractors and are well advanced in the permitting process.

BROKEN HILL, AUSTRALIA - January 20, 2023 - Hydrostor Inc (Hydrostor), a leading long duration energy storage (LDES) solution provider, announced that it acquired the remaining 50% interest in the Silver City Energy Storage Centre (Silver City or the Project) from Australian developer, Energy Estate, resulting in Hydrostor owning 100% of the Project.

Compressed air is stored in hard rock caverns excavated below ground. Image: Hydrostor. While Hydrostor has just one project in commercial operation so far, a 2.2MW system with about five hours storage duration, in Ontario, Canada, it is developing large-scale projects in California and in Broken Hill that add up to 1.1GW/8.7GWh.

The agreement will see Hydrostor lease the land for a period of 65 years, with construction expected to begin next year following development approval. SCESC will provide crucial long duration energy storage capacity and stability to the Broken Hill region, with a total capacity of 200 MW and 1,600 MWh (8 hours of storage duration at full output).

The BESS could be joined in Broken Hill in a few years by a much larger system using a very different

United Kingdom hydrostor broken hill

technology. Canadian company Hydrostor is developing a 200MW/1,600MWh advanced compressed air energy storage (A-CAES) plant in the region. Last month ARENA committed AU\$45 million towards the cost of Hydrostor's Silver City project. It ...

The project, located near the Potosi mine on the outskirts of Broken Hill, will be a groundbreaking 200-megawatt facility capable of storing 1600 MWh of electricity. Construction is set to begin in 2025, with completion anticipated by 2028.

Aligns with the strategy of Broken Hill City Council to reach 100% renewable status by 2030, as outlined in their Sustainability Strategy 2018-2023 and Cities Power Partnership Pledge. About Broken Hill. Broken Hill is located in the far west of New South Wales and is part of Transgrid's south western transmission network.

BROKEN HILL, AUSTRALIA, Dec. 07, 2023 (GLOBE NEWSWIRE) -- Hydrostor, a global long duration energy storage (LDES) developer and operator, has reached an Agreement with Transgrid, which will see the 200MW/1600MWh Silver City Energy Storage Project (Silver City) provide back-up power to Broken Hill as early as 2027. A first of its kind energy storage ...
