What is a Turks Island & Caicos?

The Turks group is composed of Grand Turk Island, Salt Cay, and lesser cays. The Caicos group lies northwest of the Turks and is separated from them by a 22-mile- (35-km-) long, 7,000-foot- (2,100-metre-) deep marine trench called the Turks Island Passage, or "the Wall."

How many Turks live in South Caicos?

More than four-fifths of the population lives on three islands: South Caicos, Providenciales (commonly called Provo), and Grand Turk. Cockburn Harbour, the islands' second largest town, is on South Caicos. The name Turks is said to derive from a species of indigenous cactus, the Turk's head (*Melocactus intortus*), whose scarlet top resembles a fez.

Does Turks and Caicos have a strong economy?

Turks and Caicos underwent rapid economic growth in the two decades between the mid-1980s and the early 21st century, which was reflected in an average annual increase of 8 percent in its gross domestic product (GDP) during that period.

How many Caicos Islands are inhabited?

Only six of the larger cays and two of the smaller cays are inhabited. More than four-fifths of the population lives on three islands: South Caicos, Providenciales (commonly called Provo), and Grand Turk. Cockburn Harbour, the islands' second largest town, is on South Caicos.

What type of vegetation is in the Caicos Islands?

Devastating storms occur only infrequently, such as in 2008, when Hurricanes Hanna and Ike hit the islands; in particular, Grand Turk, Providenciales, and South Caicos sustained widespread and severe damage. The types of vegetation encountered on the islands include scrub (xerophytic shrubs), coppice, savanna, and marsh-swamp.

What are the characteristics of Caicos Islands?

The islands are low-lying and formed by coral reefs. They are characterized by numerous karst features, including banana holes (small sinkholes containing rich soil), caves, caverns, and sea cliffs. There is little arable land. Aragonite, a type of calcium carbonate, is found on the shallow banks off West Caicos.
