How much power does a Viking Energy DP-I have?

Download specs. The "VIKING ENERGY", built in 2019, is a DP-I shallow draft multipurpose workboat of 26,48 by 11,00 meters. The twin Caterpillar engines delivering 1.940 kW which results in approx. 35,0 tons bollard pull.

What is Viking Energy?

The support vessel Viking Energy has been built at the Kleven Maritime shipyard in Norway for its owners Eidesvik and started on a ten-year charter for Statoil. It is the world's first LNG-fuelled supply/cargo vessel, designed by Vik-Sandvik as a response to industry demands for minimising greenhouse gas emissions.

How much does a Viking Energy weigh?

The vessel has a gross tonnage of 5,073t and a net tonnage of 1,521t. Its deadweight is 2,886t at 5.9m draught. The Viking Energy features dual fuel engines, with a consequence that it can run on both LNG and ordinary marine diesel oil in any proportion.

What can a Viking Energy carry?

The Viking Energy can carry fuel oil, water ballast or drill water, potable water, methanol, brine, liquid mud and dry bulk. The Viking Energy is the world's first LNG-powered supply vessel. The bridge of the Viking Energy. The touchscreen operating console used on the bridge. Diagram of the piping on the Viking Energy.

Can a Viking Energy run on a diesel engine?

The Viking Energy features dual fuel engines, with a consequence that it can run on both LNG and ordinary marine diesel oil in any proportion. Using LNG results in a 90% reduction in the outlet of NO_x (approx. 200t a year) as well as a 30% reduction in CO₂. Tests have shown that the vessel has a fuel economy rate of 30% better than that of diesel.

Can the Viking Energy run on LNG?

The VIKING ENERGY features dual fuel engines, so is able to run on both LNG and marine diesel oil in any proportion. Using LNG results in a 90% reduction of the outlet of NO_x (approx. 200t a year) as well as a 30% reduction in CO₂.

The Viking Energy, built in 2019, is a DP-I shallow draft multipurpose workboat of 26.48 by 11.00 meters. The twin Caterpillar engines delivering 1.940 kW which results in approx. 35,0 tons bollard pull.

Converting the vessel to ammonia operation Eidesvik Offshore and W&A;rtsil&A; will cut emissions from Viking Energy by at least 70 percent. Equinor and Eidesvik Offshore have a 21-year history of collaboration on environmental technology on Viking Energy. At the time of delivery in 2003, the vessel was the world's first LNG-fuelled supply vessel.
