There are three types of solar energy systems and two types of panels, the PV panel, the solar thermal panel, and concentrated solar power or CSP collectors. PV uses the sun's light to create electricity, which can be used for residential and commercial supplies. Solar thermal panels use the sun's heat, and most of these are used to heat water.

- Choose the power of the photovoltaic system based on consumption and local solar radiation. For a 6 kW inverter, you may need to install around 8-10 kWp of photovoltaic panels, considering efficiency losses. General diagram of the system: - Connects the system to the public operator's network through a bidirectional meter.

Solar Panels perform at optimum capacity when placed in direct sunlight. When you install your Solar Power system, try to position your photovoltaic panels directly under the noontime sun for maximum efficiency from your photovoltaic unit.. Before Installation, take care of any obstructions to sunlight. Remove all unnecessary obstructions and items such as ...

I am not sure why you said 2pcs of 120ah12V batteries in series. He needs batteries to supply the 1500w loads for 12hours at night. Basically that is $1500w * 12 = 18000wh$. dividing by 50% depth of discharge as you choose flooded, that is $18000/0.5=36000wh$ or divide by 0.8 if for AGM batteries, that is $18000/0.8 = 22500wh$.
