What is twice battery analytics platform?

The TWAICE Battery Analytics Platform is a convergence of deep battery knowledge, artificial intelligence (AI), scalable cloud software, and real-life battery data. It creates a single source of truth for how batteries should be effectively developed and operated--simple, low-cost, and high-value.

What is a battery analytics software platform?

Michael Baumann: The product in the end is a battery analytics software platform, which we are building out--it addresses the whole life cycle of batteries, and can be used by different industries. This platform has different solutions, and these solutions can be very specific.

What does twice do with used EV batteries?

TWAICE is also working with TÜV Rheinland (Technical Inspection Association, a network of companies in Germany and Austria that test, inspect and certify technical systems, roughly similar to UL or Intertek) to build a test and certification system for used EV batteries.

A centralized cloud-based analytics platform can provide battery health data in real-time. Data from multiple locations across the globe can be analyzed with powerful AI tools. In this way, dedicated energy storage health analytics software can deliver detailed root-cause analysis and provide more detailed insights into predicted aging behavior.

It has also developed a platform that can simulate the real-world performance of different cells, and can evaluate the state of health of existing battery packs.
